## Computer Science Unplugged

Free

Dr. Tim Bell, University of Canterbury, New Zealand

2018 'Outstanding Contribution to Computer Science Education' Award Winner

**For kids ages 7 to 14:** This educational 50 minute show is an action-packed, zany time exploring neat ideas in computer science. It has been "performed" for over 20 years in classrooms, science museums, science festivals, and at educational events. Kids, and the young at heart, are introduced to fundamental ideas in computing using low-tech games, magic tricks, and stories. Computers are "verboten"<sup>1</sup> as you learn about the Binary Birthday Cake, the Parity memory trick, and more.

<sup>1</sup>Or is that Verbolten @ Busch Gardens? 😊

**Following** Dr. Bell's "show" there will be a 5 minute presentation on the **new Virginia standards of learning for computer science**, and an **open question and answer session** for girls, boys, parents, teachers, educators and K-12 administrators.

More detailed information for **parents, teachers, educators & everyone:**
